

## HOME PRESS FOR SALE.

We have at the RECORD-UNION office two large double-cylinder Hes presses in perfect order, one of which will be sold for price mentioned by terms. The size of bed-plate is 6x20 inches. The purchaser can have his choice of the presses. The object in selling is to replace with one of more rapid work.

## THIS MORNING'S NEWS.

In New York Government bonds are quoted at 120 for 4s, 117 for 4s, 101 for 2s; 101 for 2s; 101 for 2s; 102 for 3s, 101 for 5s; silver bars, 110.

Silver in London, 50 11/16; consols, 105 1/4; 5 per cent. United States bonds, extended, 105; 4s, 121 1/2; 4s, 115.

In New Mexico Mexican dollars are quoted at 87 1/2c.

Mining stocks were fairly active in San Francisco yesterday morning, and prices were generally higher. As compared with the best rates Wednesday morning, there was an advance of 5c to 50c in most of the Comstock descriptions on the first call. On the second morning, however, there was a slight decline in the rates of stocks.

The Massachusetts Prohibition State Convention met yesterday in Boston, and nominated Charles A. New Bedford, for Governor.

A boiler explosion at Pittsburgh yesterday killed and injured a number of persons.

Additional wrecks are reported on the Newfoundland coast.

A death from cholera has occurred in the Sligo County Hospital, Ireland.

President Arthur has left New York for New Haven.

Two vessels from Dunkirk, for Durban, collided and sank.

The foot and mouth disease still rages in England.

The French proposals upon the Tonquin question have not proved acceptable to China.

Ernest (Brown) Collier) quitted with his wife, Mrs. Hallax, N. S., and headed her with an ax.

A train in Yucatan was stopped by hours upon the track.

The water is lower in the river at Minneapolis, Minn., than it has been for years.

The gross earnings of the Northern Pacific Railroad for 1883 were \$7,855,459, an increase of \$2,000,000.

Near North San Juan, Nevada county, 153 legs of powder exploded, killing four horses and fatally injuring their driver.

A beautiful young lady of Savannah, Ga., gave a sketchy New York drummer a most unmerciful cuffing the other day.

Whitelaw Reid, of the New York Tribune, is spoken of as a candidate for the United States Senate.

Parties have left Denver, N. M., to take charge of little Charley McComas, a captive among the Apaches at Casa Grande, Mex.

Paddy Ryan, with one of other pugilists, is about to visit the Pacific Coast.

The village of Bay Harbor, Mo., is threatened by a forest fire, with destruction.

Longfellow, of theatrical fame, is seriously ill in New York.

Mrs. Edwin Adams, widow of the actor, is dying.

All data obtainable relating to cyclones, etc., are to be published monthly by the Signal Service Department.

Bishop John Lancaster Spalding, of Peoria, is to be made Archbishop of Philadelphia.

Sheriff, "The Prussian," says Sullivan is afraid to close a game fight.

A trial of Majors, for the murder of McIntyre, is in progress at San Jose.

One dollar is now the fare on the Pan Hand Line, Chicago to Louisville.

The total number of deaths at Guaymas, Mexico, from all causes, from August 20th to date, is 185.

The testing of railroad material was begun yesterday at San Francisco.

The 57th anniversary of the Swiss Republic was celebrated by the Swiss residents of Petaluma yesterday.

In a quarry near Colton, San Bernardino county, yesterday, a man named Murphy was killed by a falling rock.

SOME VERY STRONG TESTIMONY FOR CLEANLINESS.

The eminent English physician and microscopist, William B. Carpenter, whose experience extends back to the cholera season of 1831, and whose place in medical ranks is foremost, takes issue with Professor Tyndall, that the human intestine is the only breeding place for the cholera germ.

In a recent letter to the London *Daily News*, he sets forth his own belief, that that is not their only place of birth, nor is water the only means of transmission of the germ. In support of this faith, he cites three especially strong cases, showing that cholera germs breed outside the human body in collections of decomposing organic matter, and are transmitted thence through the atmosphere. At Alnwick, in Northumberland, every one in a certain row of cottages was smitten with cholera or its premonitory symptoms in a single night. Behind the cottage gardens was a row of filthy piggeries. The moment the wind blew from the cottages to the piggeries, the cholera abated; as soon as it blew to the cottages from the filth, it set in again. The poor farm of Baltimore was situated where it was believed to be especially healthful and pure in all the surroundings. With the cholera raging in New York and Washington, only a few cases appeared in Baltimore. Suddenly it broke out in the poor-houses, and the death ran up to 30 per day out of a population of 800. There was no over-crowding, every supposed sanitary measure had been adopted, perfect cleanliness prevailed, the food was excellent, and the drainage believed to be perfect. But as the disease grew worse, examination was had, and it was found that the drainage all led off into a marsh some distance away from the houses, and below a deep ravine caused by a stream of water that carried the drainage. The prevailing wind was from that direction, and the cholera was the worst when it blew longest and strongest from the marsh to the houses, and the first cases always occurred in the back part of the houses, where the wind first met them. The marsh was at once operated upon, the drainage corrected, and instantly the cholera ceased. The doctor says that, lecturing some years after at Sion College before a body of clergymen, he made bold to ask them, after reciting the facts in this case, if they believed that had all Baltimore gone down on its knees in prayer and entreaty, without taking measures to correct that mæst according to the laws of Divine government and under a knowledge of the penalty for their infraction, the good results would have been brought about? In other words, what the good doctor asked was, "Do you believe that God would have corrected that mæst for you while you sat idly by?" His third illustration is more striking than the preceding two, and fully establishes the fact that cholera germs will propagate in low foul places, and be wafted on the wings of the wind to the nearest human habitations, just as we know are other germs of other ill health; hence the absolute necessity for thorough cleansing of all filth deposits. In a town in Mexico of 20,000 inhabitants the cholera appeared. The physicians noticed that though the place was on a high terrace on a mountain side, with the purest air, the cases of cholera were first along a particular line, and the disease subsided as that line was departed from and grew in virulence as another line was approached, this latter being at an angle with the first. This second outbreak was always preceded by a wind blowing from the direction of the first line, if extended to some distance on its angle. This led to the conclusion that there was at a focal point of the two lines a cause for the dis-

ease. The angles were followed up, and the point found, and there was discovered a huge heap of filth in a miserable yard, exactly at the point of convergence of the two angles. The filth was destroyed, and the cholera immediately ceased. He says there can be no doubt but that this hill heap was the nidus in which the cholera germs were propagated. So he concludes that the cholera germ will extend outside the human body, and the deposit of excreta and the fluids of the human body in the proper place will set the breeding process in operation; that is to say, the proper conditions will, in filth deposits, produce the cholera germ, and it will be communicated to human beings through the atmosphere. In the light of this testimony there should no hesitancy in any community about utterly blotting out, no matter at what cost, every possible breeding spot for cholera in or near every community. Nor should there be any longer a question debated by municipal authorities as to the danger of depositing the rejected matter of a single cholera patient in a ditch receptacle, there to set up the germ-breeding process by which thousands will be poisoned. In the light of all the knowledge we now have, the movement made by the regular school buildings, beside the college, in the town.

The movement to establish a convent school in Woodland is meeting with such encouragement that it is now proposed to cost \$10,000, to still further increase its advantages, and to meet an imperative want, necessitated by the increase of population.

The movement made by the regular school buildings, beside the college, in the town.

This beautiful "City of the Woods" already noted for its superior educational advantages, has, by a vote of three to one, decided to build a school, to cost \$10,000, to still further increase its advantages, and to meet an imperative want, necessitated by the increase of population.

LOCAL INTELLIGENCE.

BOARD OF POLICE COMMISSIONERS.

The Board of Police Commissioners met in the Police Court-room yesterday afternoon. The minutes of the last meeting were read and approved and the usual report of the Captain received and filed. The announcement that officer O. C. Jackson would be tried for certain charges brought together great many people, and the courtroom was crowded.

M. Kuehnel, who keeps a boat and store on J street, between Eighth and Ninth, took the stand, and told how on the 19th of June, 1882, the fill in his store was robbed of \$50. He said that a few months ago Jackson came to him, saying he would give him \$100 if he would not tell the police where he had lost. At the same time Kuehnel said he believed by the statements of Jackson that the officer was a thief, and that he had been paid all the money. He declined to pay Kuehnel more than half, saying that he had incurred considerable expense in the search for the thief. The statements of the officer were true, Kuehnel says he took the proffered amount and gave the receipt.

A great many witnesses were put upon the stand, both officials and private citizens, who told the court all they knew about the case, and the only one whose testimony was important, was a negro. Kuehnel stated that he had been the victim of a robbery, and that he had been paid all the money. He declined to pay Kuehnel more than half, saying that he had incurred considerable expense in the search for the thief. The statements of the officer were true, Kuehnel says he took the proffered amount and gave the receipt.

Steamer Allowed to Dock.

SAFETY, September 20th.—The meeting of the Board of Commissioners, after a long discussion of the question of the steamer Colima, which is said to be in need of repairs. Miss Josephine Mahn, teacher, has charge of thirty-three pupils, 19 boys and 14 girls, in the school-house, and apparatus are poor and insufficient.

American River District, one mile east of the town of Franklin, has a large and commodious school-room, and well supplied with school furniture and apparatus. The library is well selected and the reading room is well lighted and carefully cared for.

Mrs. Annie Johnson is teacher, at a salary of \$50 per month. Number of pupils, 11. The school is well equipped with school furniture and apparatus.

Franklin School District, forty miles south of the city, is taught by Miss S. F. Donnelly, a teacher, who is said to be in good health. The school is well equipped with school furniture and apparatus.

Point Pleasant District, situated two miles south of the city, Miss Anna Standish, teacher, salary, \$60; number of pupils, 21. The school-house is well supplied with school furniture and apparatus.

Point Pleasant District, situated five miles northwest of Elk Grove; B. F. Holden, teacher; salary, \$75; number of pupils, 21. The school-house is well supplied with school furniture and apparatus.
